## Tread safely · land softly

### Mats for wrestling, floor exercises, gymnastics

When it is a question of their safety, then sports people want quality: BSW's sports mats. Whether for use in wrestling, floor exercises or gymnastics, whether in a professional, amateur or school environment, BSW has a range of qualitatively high-grade mats that are

tailored to each different sport. BSW developed the special composition of the compound foam body and the surface covering working together with sports people, sports equipment manufacturers and sports associations. Each particular sport has its own

particular demands. The properties of the mats are adapted to these demands through their different densities, thicknesses, surface materials and textures. For decades, top-class processing quality and high-grade materials have made BSW's sports mats a reliable partner.

### Wrestling mats

Dimensions and finish according to the international standards. Can be used for training and competition. The mats consist of a compound foam body, which is bound with brown artificial leather. The base consists of a latex material with a slip-resistant waffle structure or of needle felt, depending on choice.

To complete the range of surfaces for wrestling we supply covers made out of high-strength PVC Trevira fabric, either with a fold-over edge for mats with slip resistant bases or a velcro backing for mats with bases made out of needle felt.

#### Dimensions

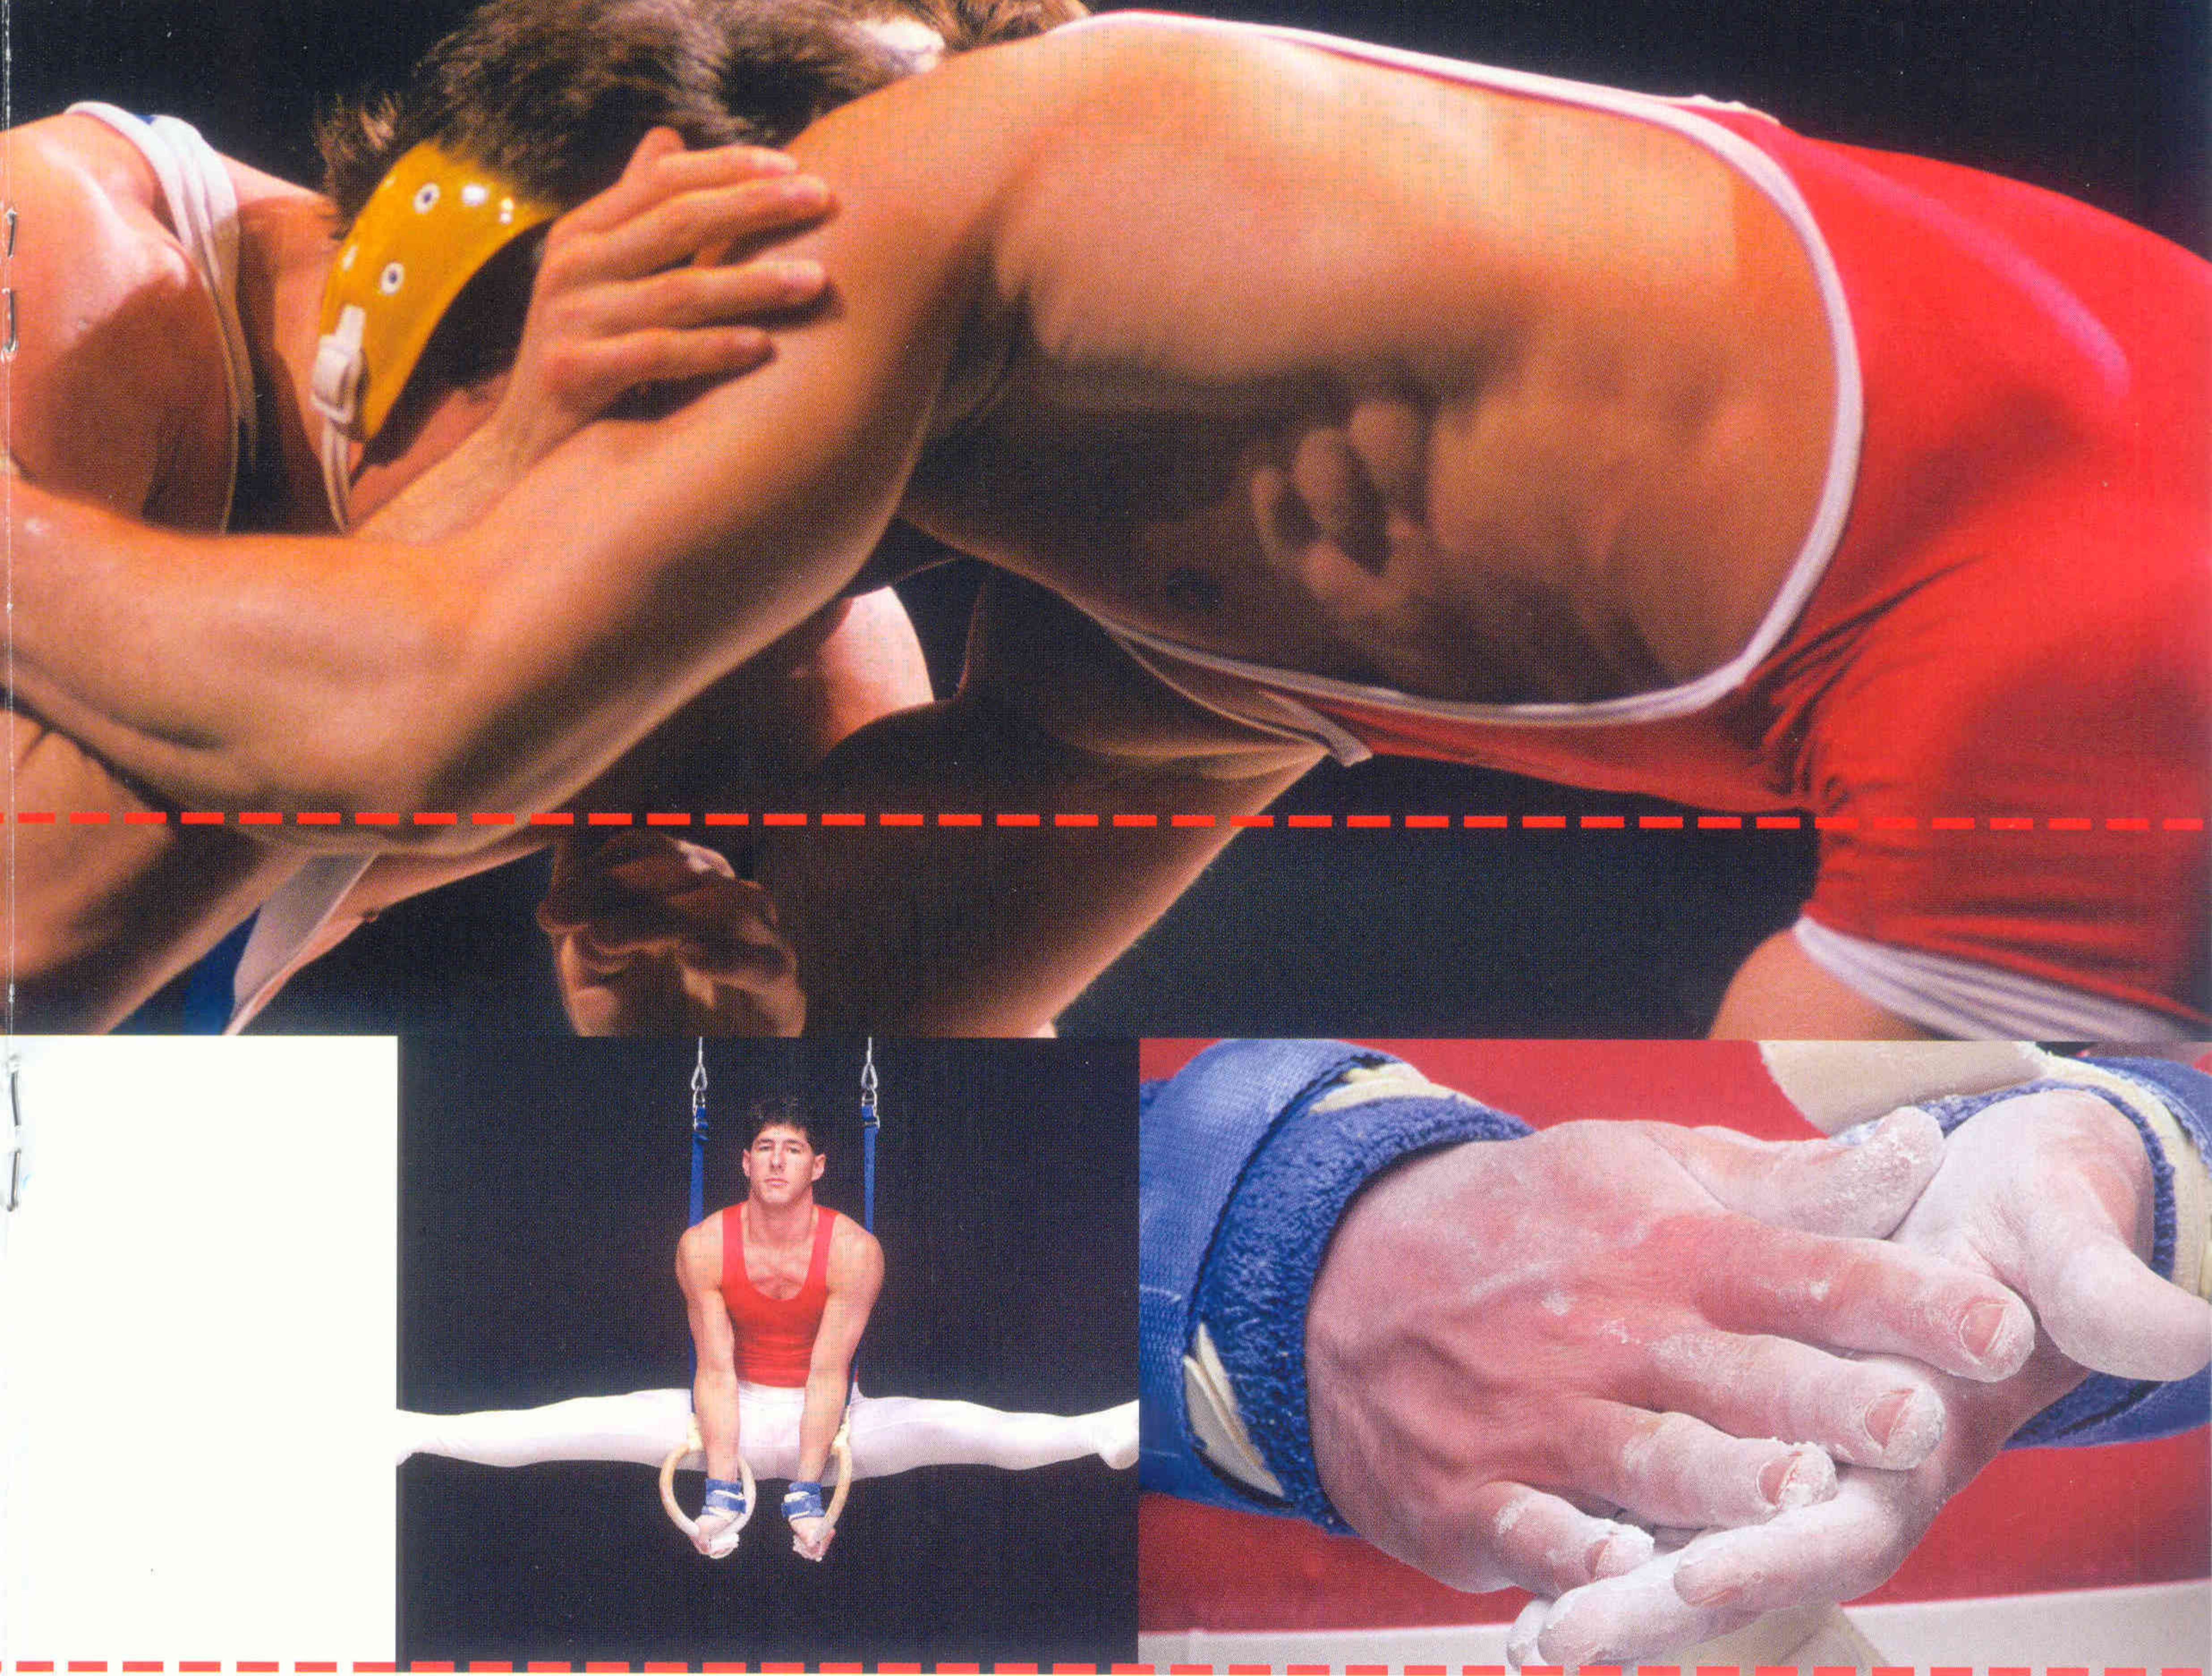

2.000 x 1.000 x 50 mm

2.000 x 1.000 x 60 mm

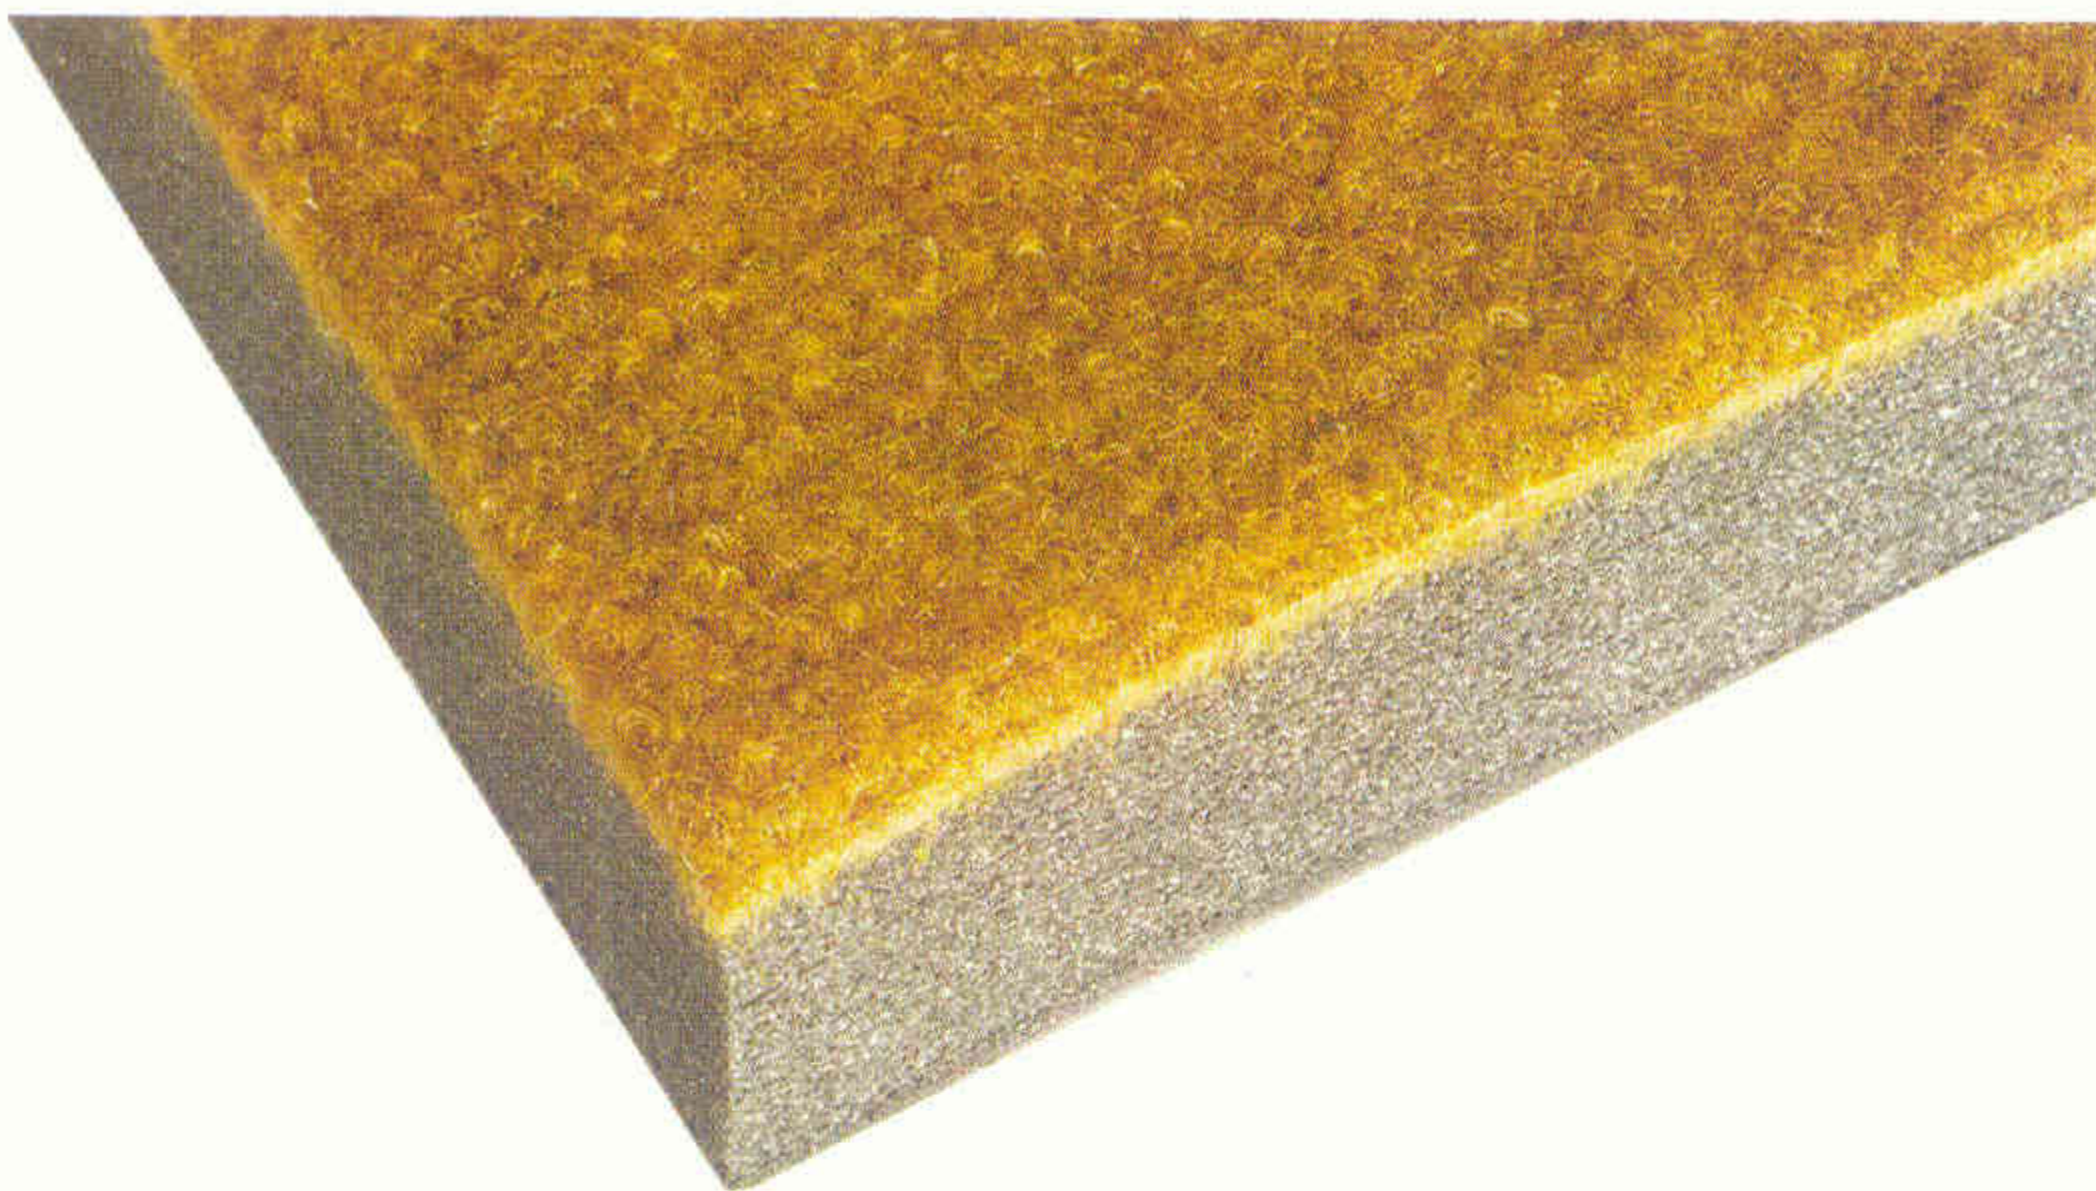

#### Density

120 kg/m<sup>3</sup>

## Mats for floor exercises

Single lengths and surfaces for floor exercises made of multi-layer PE foam. The top surface consists of skin-friendly and hard-wearing needle felt, while the underside is made out of slip-resistant foam. All materials are bonded tightly with each other through a process of heat lamination. What makes the mats special is the fact that they weigh very little and have a consistent stability.

### Dimensions

Lengths	up to 30 linear metres
Widths	1.500 and 2.000 mm
Thickness	20, 25, 35 mm

### Density

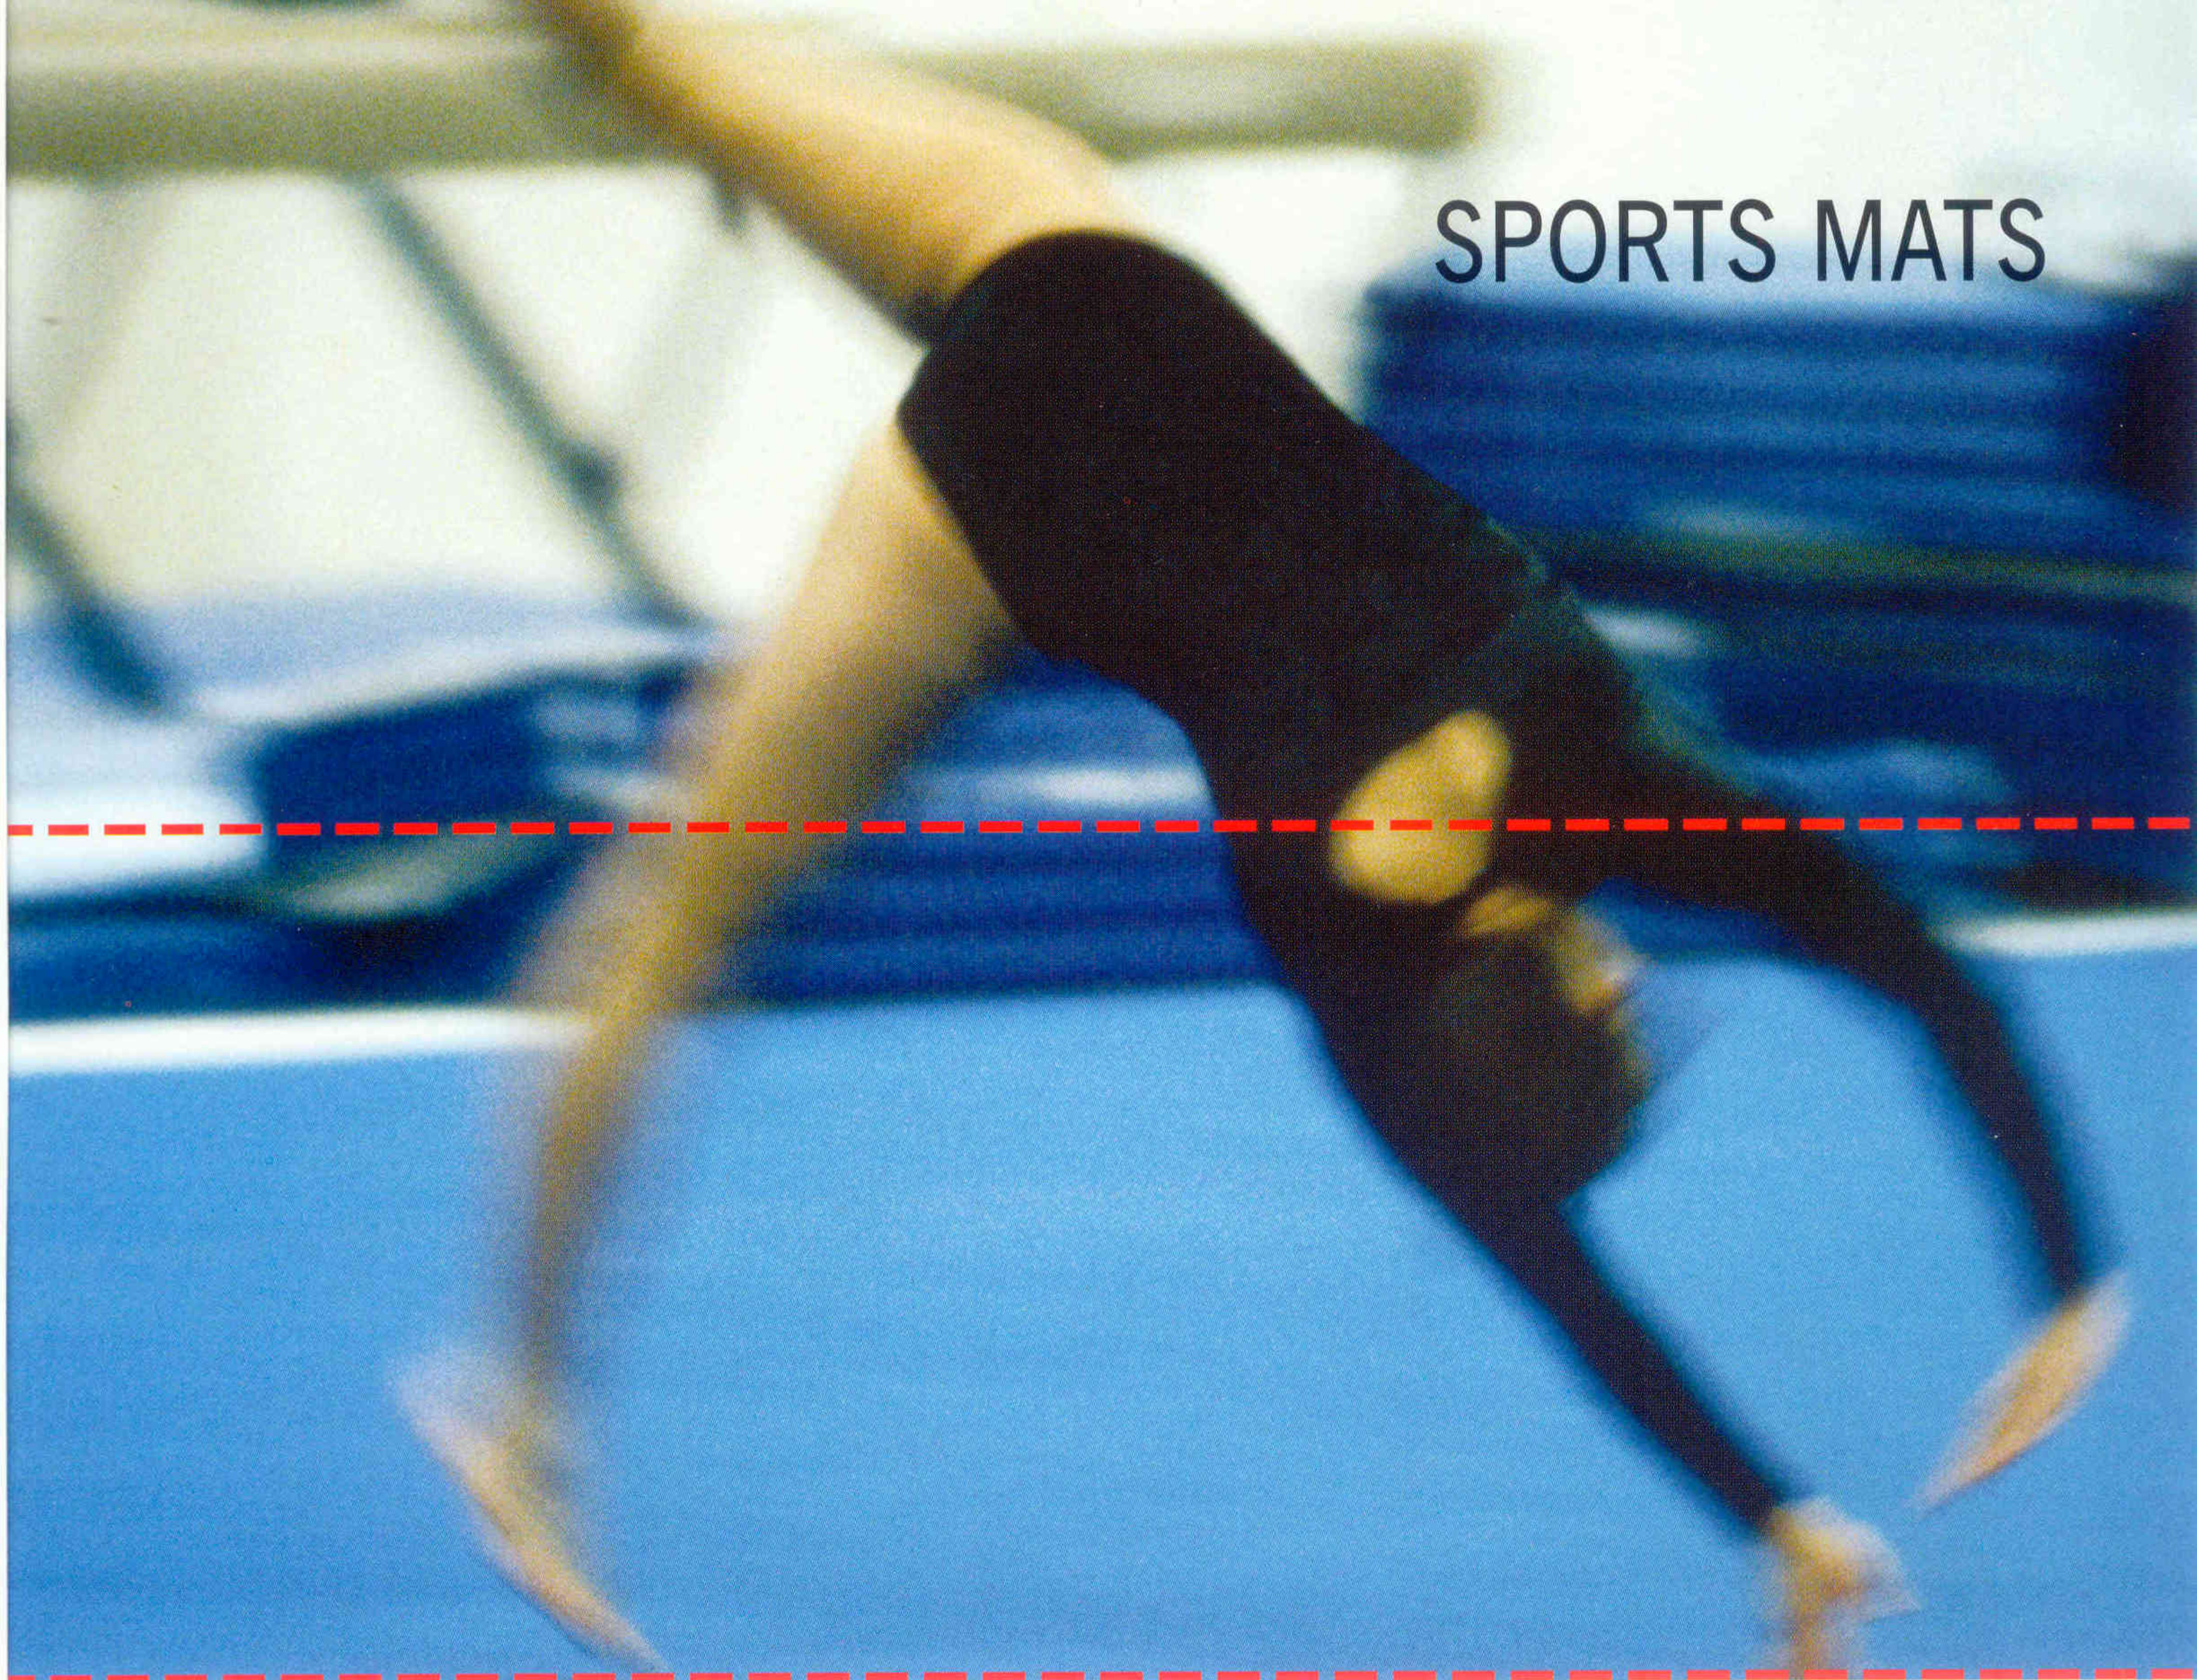

35 kg/m<sup>3</sup>

### Colours

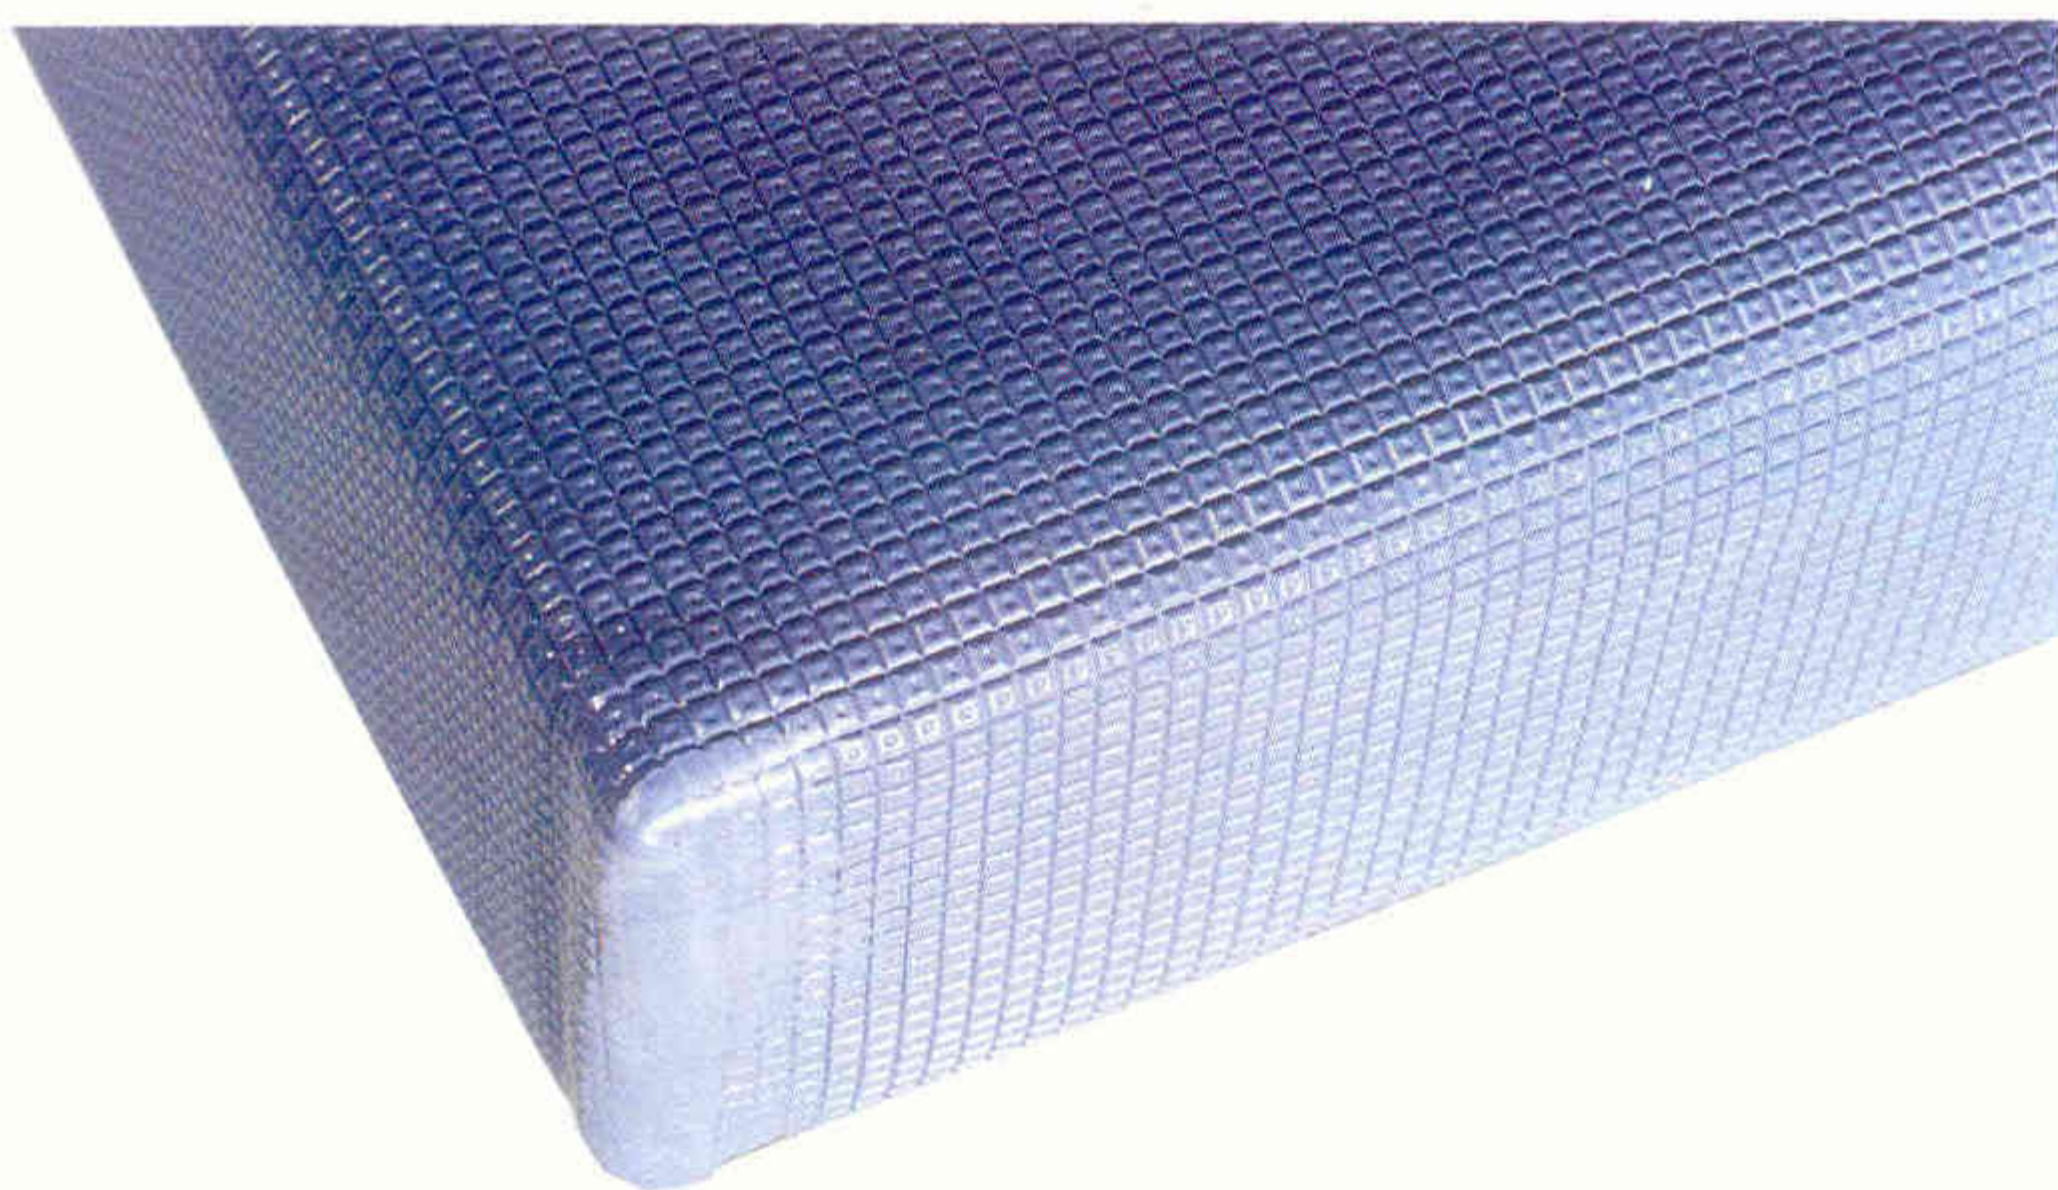

Amber, blue-grey

# SPORTS MATS

## Mats for schools and gymnastics

The compound foam core of these mats is available in different thicknesses and densities – depending on the requirement. It is available with a PVC covering bonded to the foam core, bottom slip-resistant.

### Dimensions

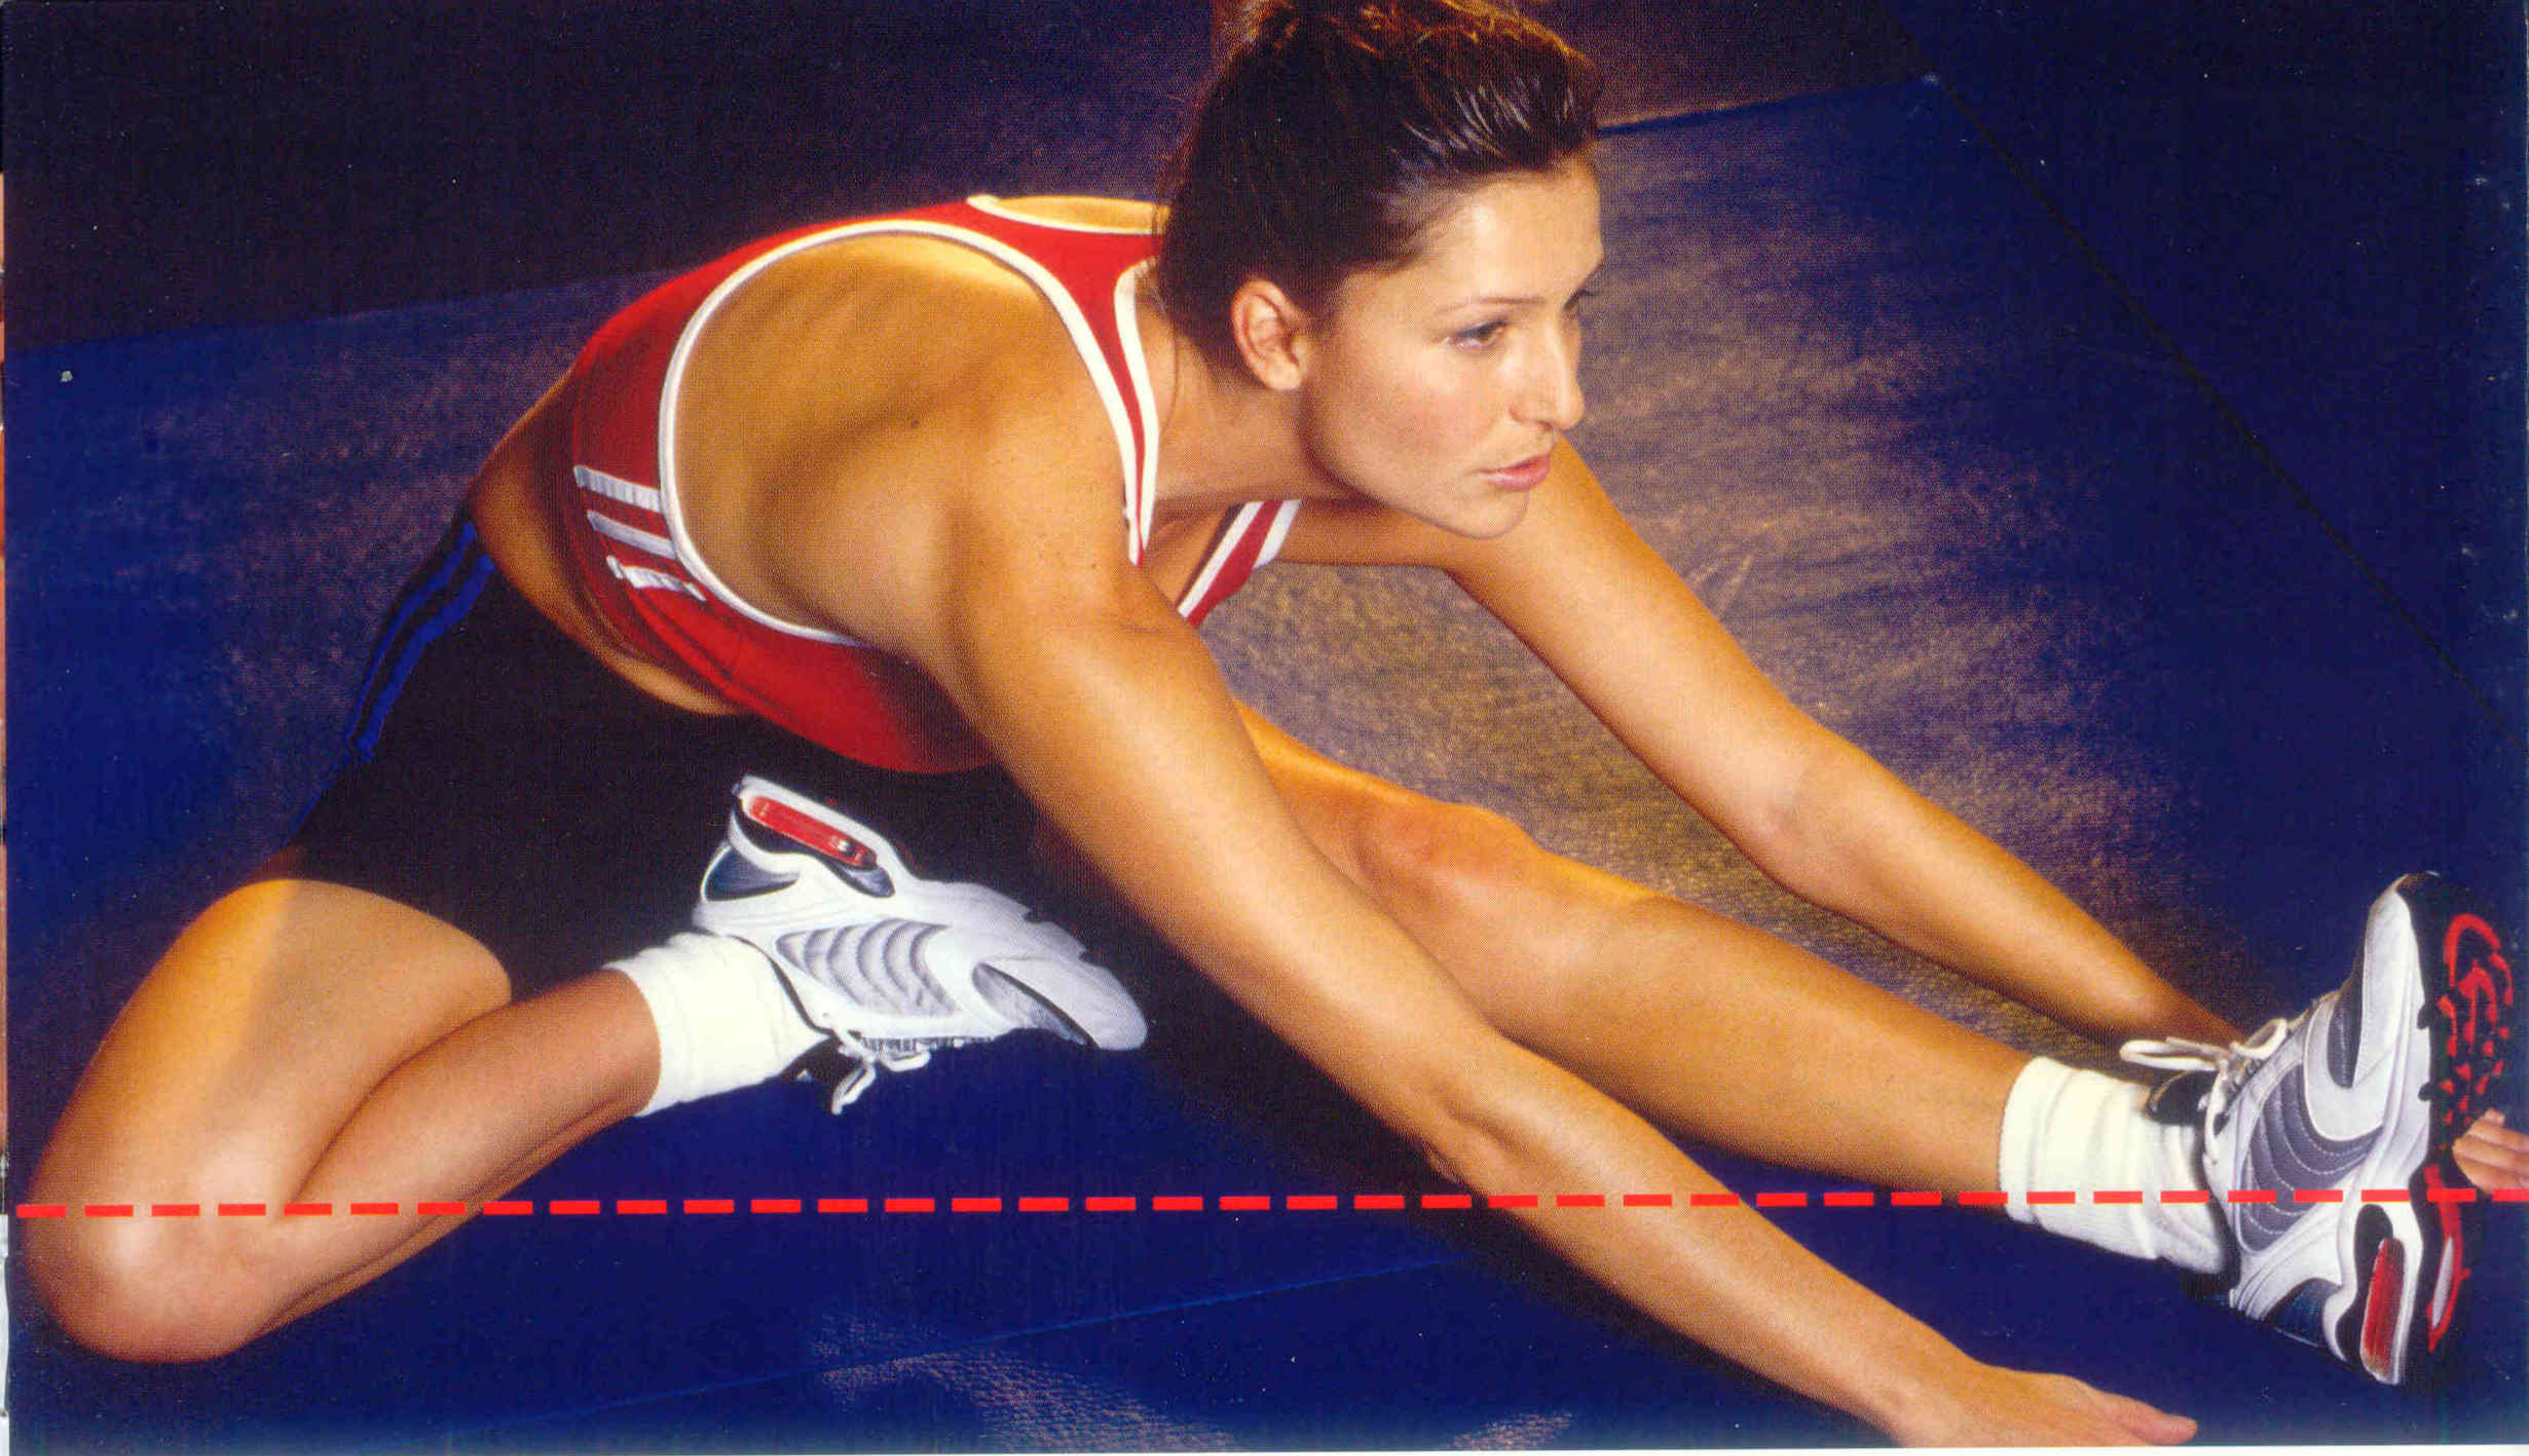

Standard commercially available dimensions, special formats are possible.

Lengths	1.500 and 2.000 mm
Widths	1.000 mm
Thickness	40, 50, 60 and 80 mm

### Densities

80, 100, 120 kg/m<sup>3</sup>

## Crash protection components

For walls, and any surface into which people involved in sport might unintentionally crash. Available in various dimensions. Consist of a crash protecting foam compound core with surface and side covering made out of resilient artificial leather. Installed by adhesion.

### Dimensions

To order

### Density

240 kg/m<sup>3</sup>
