

INOX-FORM N 6

INOX-FORM D 8

INOX-FORM - surfaces designed individually

Our strong point is the development and production of specially-formed, textured and coloured metallic building components... in dialogue with architects, designers and cladding designers. The result enhances exteriors and interior furnishings.

Drawing on our long experience in mechanical, electrochemical and chemical surface treatments and a digitally-controlled finishing process, we execute complex designs and building instructions with precision and economy. We have an extensive stainless steel warehouse at our disposal, use large-volume immersion baths, the most CNC equipment, develop control software, specially-manufactured tools...and execute visions.

Surfaces in mirror finish

With mechanical polishing we come up to high-gloss and mirror finished surfaces in quality 2P/ No. 7 and 2P/ No. 8. We produce mirror sheets in the thickness 0.5 mm to 5.0 mm and with maximum width to 2.000 mm or with maximum length to 6.000 mm. The sheets are covered with protective film.

Stainless steel cup in front of a mirror polished surface 2P/No. 8

All surfaces shown can be coloured by using the INOX-SPECTRAL®-process or can be protected against finger prints and dirt by using the INOX-TEC®-process. We are pleased sending you further information.

Versatility in Stainless Steel

patterned, grinded, polished or
on individual basis

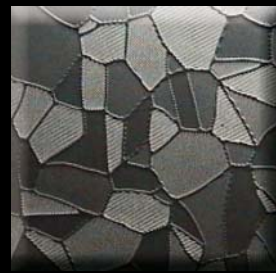

Hardly another material has such a performance as stainless steel. With this folder you will provide an insight into our comprehensive scope of supply and services concerning stainless steel sheets and their variation range.

Patterned or textured surfaces reject less; scratches, spots and finger prints appear to a lesser extent. Other than the mentioned properties, stainless steel sheets have a high stability and formability and offer a wide range of possibilities for use, e. g. claddings, ceilings, interior panelling at elevators or counters.

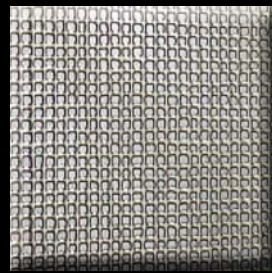

SURFACE VERSATILITY

We have a large stock on hand and offer patterned, textured, grinded, bead blasted and mirror polished stainless steel sheets in quality AISI 304 and in thickness 0.8 mm, 1.0 mm, 1.5 mm and 2.0 mm. We store the standard dimension 1.250x2.500 mm. Other thicknesses, qualities and dimensions are available on request. We are pleased to send you our cards with original samples.
