FITNICE is a high tech textile made of vinyl coated HTPES yarns, which combines technology, aesthetics and comfort in one single design, and unlike similar products, offers the warmth and decorum of interior fabrics.

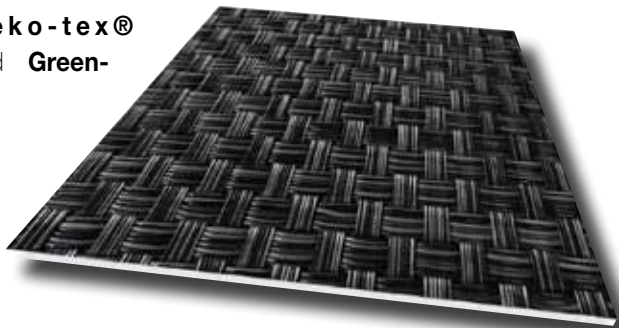

Finishes applied to **FITNICE** render this unique material unalterable and unaffected by the pass of time. In search of excellence the material combines a perfect performance with flame retardancy, antibacterial and antifungal properties and low maintenance.

FITNICE re-invents longevity and applies it to the world of design.

Inspired by the Eixample district in **Barcelona**: an example of metropolitan development that made easier urban living, **FITNICE** the perfect ally for any interior decorating project in order to make your life easier.

FITNICE is manufactured in a european plant driven by sustainable production processes under

Oeko-tex®
and **Green-**

guard® certifications, along with the **Ecocodi-
ce®** label, an innovative program for recycling
rest materials and residuals.

This is **FITNICE** the new concept of materials
for living spaces which make's your life nicer.
